

# smartPortal

**Manage your volunteers the smart way.**

smartPortal is a browser-based user pathway into smartCommunicator that enables your volunteer base to create customized caller profiles and participate in volunteer surveys in order to intelligently align constituent with caller. Additionally, volunteer directed scheduling, convenient calling queues, and post-call social media integration and promotion are all possible within this intelligent volunteer management system.

## Phone-a-Friend

**Build relationships with data before calling even begins.**

Phone-a-Friend is a browser-based calling interface enabled for smartPhones, tablets, and laptops that can receive and send calling jobs from the core smartCommunicator platform from any remote location with an internet connection. When used in conjunction with smartPortal, Phone-a-Friend becomes a powerful remote calling platform that enables managers to pair their callers with like-minded constituents – thus hedging call success while maintaining the convenience of home-based messaging.
